Regional Anaesthesia
Peripheral Nerve Location

The Visible Difference

Developments in ultrasound technology and techniques are revolutionising peripheral regional anaesthesia - and at Vygon we're making a **visible difference**.

To meet these new technological challenges Vygon has specifically developed Echoplex+ needles for use with ultrasound and stimulation, as well as producing new Visioplex needles to use with just ultrasound.

Echoplex+[®]

Echoplex+ is designed for clinicians who use ultrasound and stimulation techniques to locate the peripheral nerve sheath.

Thanks to a new insulating coating the nerve stimulation needle has been made fully echogenic. The needle is fine, the outer surface is smooth and the echogenic coating goes right to the tip.

Removable extension tubing

Enables direct connection with syringe if required.

Ergonomic transparent hub

For ease of use and visibility of aspirate.

Centimetre markings on needle shaft

Assist with determining needle depth, particularly for deep blocks.

20° needle bevel

Combined with patented coating provides equivalent feel during insertion of a 30° bevel.

Insulating polymer layer

Enables the use of mono-polar nerve stimulation.

Patented coating

Maximising reflection
Minimising artefacts

The coating uses microscopic glass beads which are distributed in an insulating polymer. The quantity of glass beads has been precisely calculated to maximise reflection whilst minimising artefacts.

Echogenic right to the needle tip

Visioplex under ultrasound

Visioplex®

Visioplex is designed for use by clinicians who prefer ultrasound to other forms of nerve location, or in procedures for which stimulation techniques are inappropriate, such as transversus abdominis plane (TAP) blocks.

A special manufacturing technique makes Visioplex highly echogenic right up to the tip, enabling the clinician to place the anaesthetic solution with maximum accuracy.

Removable extension tubing

Enables direct connection with syringe if required.

Centimetre markings on needle shaft

Assists with determining needle depth, particularly for deep blocks.

30° needle bevel

Provides optimum balance of penetration, feel and needle tip visibility for maximum accuracy¹.

Sand-blasted at needle tip

Ensures best possible visibility under ultrasound.

Ergonomic transparent hub

For ease of use and visibility of aspirate.

Locoplex®

This stimulating needle is insulated over its entire length. The bevel is completely exposed to enhance conduction of current and for easier needle insertion.

Plexygon®

A compact and easy to use device allowing identification of nerves by the emission of a low intensity electrical current.

Echoplex+

Vygon Code	NHSSC Code	Length (mm)	G	Box Quantity

Using the Right Needle

1. Interscalene block
shoulder
25 - 35mm needle

2. Supraclavicular block
elbow and hand
50 mm needle

3. Infraclavicular block
elbow and hand
85 - 100 mm needle

4. Paravertebral block
thoracic
80 mm needle

5. Axillary block
hand and forearm
50 mm needle

6. TAP block
abdominal wall
50 - 100 mm needle

7. Lumbar plexus
hip and femur
120 - 150 mm needle

8. Sciatic blocks
leg and foot
85 - 150 mm needle

9. Femoral block
knee
50 - 85 mm needle

Anterior

Posterior

A VYSET® custom pack allows you to create a high quality pack to match your local protocol, incorporating all the items you need.

- Ultrasound probe covers and gel
- Transparent peelable drapes
- Your choice of swabs and syringes
- Skin preparation
- Sharps safety devices
- A choice of dressings
- Trust specific customised documentation.

Contact the VYSET custom pack team today to discuss your requirements.
